

PRESS RELEASE

ECO3 introduces Apogee v14: More automation, better connectivity, and enhanced flexibility for print production

Mortsel, Belgium – May 20, 2025

ECO3 has launched version 14 of its Apogee workflow software, reinforcing its commitment to helping commercial printers streamline production, reduce costs, and increase efficiency. Building on its legacy of innovation, Apogee v14 delivers smarter automation, seamless cloud connectivity, and greater adaptability to the evolving needs of hybrid printing environments.

The new release responds to market demands for tighter integration and easier management of complex production processes. The synchronization of Apogee Web Production Schemes with ePS Technique, as part of the ePS Publication Print Suite, perfectly illustrates how integration simplifies complex, manual production workflows. In addition to cost-reduction tools like InkTune and SPIR@L, a new module within Apogee Impose, PaperTune, is now available. PaperTune optimizes the use of makeready sheets, the extra paper required during initial press setup. By intelligently placing color bars, it allows these sheets to be reused up to four times, reducing paper waste and significantly lowering costs for each print job.

Apogee v14 introduces the Production Dashboard, a powerful tool that provides real-time production statistics. Track key metrics such as the number of jobs, plates, proofs produced per day, week, or month. If you're using InkTune or SPIR@L, the dashboard will also display ink reduction data, empowering you to make more informed decisions and optimize cost-efficiency.

"Apogee v14 is designed to help print businesses do more with less," said Erik Peeters, Market Manager Commercial at ECO3. "It's about making production faster, more reliable, and ready for the future. Whether you're a small shop or a large operation, this release gives you the tools to take control and stay competitive."

Apogee v14 is now available for both existing customers and new users.

About ECO3

ECO3 is a leading global supplier of prepress systems to the printing industry. The company provides a wide range of integrated solutions to commercial, newspaper, packaging, and label printers. These solutions include printing plates, computer-to-plate systems, workflow and print management software, and pressroom chemicals.
